The Linea One is our top of the range appliance and has been designed to provide the complete heating and hot water solution for domestic applications. Rated 'A' for efficiency the Linea One combi boiler is over 90% efficient and is one of the most energy efficient appliances on the market. By utilising the weather compensation technology, supplied as standard with the Linea One, the efficiency can be increased by a further 3%, making the Linea One up to 93% efficient!\*\*.

### Highest technology

By incorporating the most advanced technology available the Linea One has a class leading modulation ratio of 10:1. This high modulation range means that the Linea One can operate between 3.8kW and 38kW making it the ideal boiler for domestic properties of different sizes, from one bedroom flats to larger detached homes, whilst maintaining its efficiency.

### 5 year parts and labour warranty

The Linea One is backed by an exclusive 5 year warranty (subject to registration and annual servicing), highlighting the quality of build of the appliance. As with all domestic gas boilers, an annual service is recommended to maintain optimum performance, efficiency and safety.

We pride ourselves on providing a first class after sales service with 4 dedicated regional customer care centres in UK and Ireland, supported with 41 factory trained Vokèra field engineers along with 85 service agents, which are able to support customers nationwide.

In addition to a free 5 year warranty with the Linea One range, we also make a promise to all our customers:-

*Our dedicated customer service team and Gas Safe registered engineers are available 6 days a week to support the needs of every single Vokèra boiler installation. They respond to every call within 48 hours or less, or at a time agreed with the householder. They will make every effort to solve any technical problem over the phone, answering quickly, politely and at all times acting in the best interest of our customers.*

### Fuel efficiency

The Linea One has a modulating pump which reduces the electrical consumption by up to 50%, compared to other similar appliances, and also minimises any temperature fluctuations, so you can enjoy a continuous flow of hot water whilst saving money on your fuel bills.

### Environmentally friendly

Vokèra are committed to the manufacture of the most environmentally friendly products and continue to invest in limiting emissions.

The Linea One's impressive energy efficiency ratings make it an industry leader and one of the most energy efficient combination boilers currently available, with up to 93% of the fuel used being converted into heat. Significant research and development has also enabled the Linea One to declare a NOx emissions of just 29mg/kWh, ensuring harmful emissions are kept to a minimum.

## Complete control

The Linea One has been designed to create an intelligent and reliable heating and hot water solution. The Linea One offers the widest choice of operating functions within our boiler portfolio with the intelligent functions within the boiler allowing you to easily operate and control your heating and hot water timings, ensuring total comfort while helping to maximise energy savings.

### Intelligent 'Pre Heat Memory' function

The Linea One incorporates an intelligent domestic hot water 'Pre Heat Memory' function that, when selected, adapts the appliance pre-heat function to match your typical daily hot water usage pattern. Over a 1-week period, the boiler monitors at what times and how much hot water your household uses, thereafter the pre-heat function of the boiler is automatically adapted to suit your lifestyle, ensuring that there is always an immediate supply of hot water when you need it.

### 'Comfort' function

The 'Comfort' function allows you to set a fixed outlet temperature for DHW within the range 35°C to 45°C (factory set at 40°C).

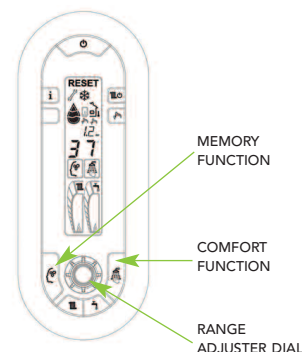

By choosing to operate this function you ensure that your DHW is of a comfortable and safe temperature which is especially useful if there are young children or elderly relatives in the home.

### Easy to understand control panel features and functions

The simple to use control panel allows you to activate and adjust all the operating modes and functions, including the 'Pre Heat Memory' and 'Comfort' functions, by simply pressing the relevant button.

You can also switch the control of the boiler to an external remote device, such as the OpenTherm programmable room thermostat. When no operating function is active both the heating and hot water can be switched on and the temperature controlled via the range adjuster dial.

The control panel includes a back lit LCD panel that displays details of the current operating mode, current temperature and system pressure. The display is also able to aid your engineer during installation, commissioning and servicing by providing detailed appliance information when the 'Info' button is utilised.

### Maximise energy efficiency

With the average boiler efficiency now reaching over 90%, technology within boilers is now so advanced that, even with future developments, there is little chance of boiler efficiencies increasing much further. The one area that can still help maximise efficiency and overall performance of the boiler is the correct use of a control.

*Ask your engineer to install the weather compensation control sensor, supplied with the Linea One, to increase its efficiency by 3%*

Weather compensation control sensor

The Linea One comes with the **weather compensation control** supplied as standard and increases the boiler's efficiency by a further 3%, making the Linea One 93% efficient\*. The control manages the central heating temperature by independently regulating the boiler in line with external weather conditions, increasing energy efficiency while delivering maximum comfort levels.

The Linea One is also compatible with the **OpenTherm protocol programmable room thermostat**. The OpenTherm control allows you to set different central heating temperatures for different times of the day, providing a simple solution to heating controls while offering you maximum flexibility. In contrast to the weather compensation control, the Vokèra OpenTherm programmable room thermostat modulates the boiler in line with the current and the desired set room temperature, providing a consistent room temperature.

*Take complete control of your central heating temperature and timings by utilising the advanced OpenTherm protocol programmable room thermostat*
